

Material Handling

Drawer boxes · Cabinets · Doors

OSHA 29 CFR 1910.176 (materials) · 1910.178 (forklifts / pallet jacks) · General Duty Clause

DATE _____ FACILITATOR _____ DEPT / SHIFT _____ HEADCOUNT _____

WHY THIS MEETING

We move 4x8 sheets, drawer boxes, cabinet parts, and doors all day. Most strains, crushed fingers, and struck-by injuries happen on those moves. Plan it. Use a cart. Keep aisles clear.

TALKING POINTS

1. Two people or a panel cart for a full sheet of plywood, MDF, or particleboard. Do not walk a sheet alone if you cannot see your feet.
2. OSHA does not set one legal lift weight. If a stack of drawers or a door load is awkward, get help or a cart.
3. Clear offcuts, hoses, and empty pallets before you pick anything up. Keep aisles and exits open (1910.176).
4. Stack drawer boxes and doors so they cannot tip. Band or restack a leaning pile. Never pull from the middle of a sheet stack.
5. Forklifts and powered pallet jacks: trained operators only. Stop, make eye contact, stay out from under the forks (1910.178).

BEFORE YOU MOVE IT

- Sheet stock: cart or two-person lift. Call the corner.
- Drawer boxes: on a cart, not stacked in your arms down the aisle.
- Doors and cabinet parts: do not lean them on a saw, edgebander, or CNC.
- Path clear? No cords, scrap, or wet glue on the floor.
- Will this stack still be stable after you set it down?
- Exits, panels, and fire gear still open?

DO

- Bend at the knees. Keep the load close. Turn with your feet.
- Team-lift long doors and sheets. Say who walks backward.
- Set the brake on a cart before you load boxes or doors.

DON'T

- Do not twist or throw parts onto a stack.
- Do not block aisles with sheet stock or door carts.
- Do not ride a pallet jack or walk under raised forks.

STOP WORK IF

The sheet or door load is unstable, the aisle is blocked, the cart or jack is damaged, or you were not trained on that equipment. Stop and get help.
