

DBS Safety — What We Built (Plain English)

For: Drawer Box Specialties

Date: September 2026

Think of this like a story about a safety notebook for the shop.

We built a website the team can open on a tablet. People sign in after safety meetings. When the boss taps Save progress, the papers go into

a folder in Google Drive — like putting finished worksheets in a filing cabinet that everyone can find later.

1. The safety app (the notebook)

WHAT IT IS

A small website made with Next.js (a way to build web pages).

LIVE ADDRESS (where the shop opens it):

<https://drawerboxspecialties-ops.github.io/dbb-safety/>

WHAT YOU CAN DO ON IT

- Pick a month (example: September 2026)
- Open the safety talk (example: PPE — hard hats, gloves, etc.)
- Tap Sign this sheet
- Each worker taps their name and signs with a finger or stylus
- Tap Save progress when done

EXAMPLE

Maria signs for Assembly. Heladia signs too. Trainer signs at the bottom.

Save progress makes two PDF files:

September 2026 PPE sign-in.pdf (who signed)

September 2026 PPE talk.pdf (the safety talk)

2. Signatures (writing your name)

PROBLEM WE FIXED

Signatures looked jagged — like connect-the-dots with straight sticks.

Sometimes they showed up as a black box on the sheet.

WHAT WE DID

- White background on the sign pad (no black box)
- Smooth ink using a library called perfect-freehand
- Undo, redo, and clear still work

EXAMPLE

Open Sign here !' write Maria Lopez in cursive !' Done.

The name should look like smooth pen ink, not zigzag lines.

3. Save progress !' Google Drive (the filing cabinet)

WHAT HAPPENS WHEN YOU TAP SAVE PROGRESS

1. The app remembers signatures for THAT month on the tablet
2. It builds the sign-in PDF and talk PDF
3. It uploads them to Google Drive
4. If upload fails, it downloads the PDFs to the tablet instead

WHERE FILES GO

Google Drive folder:

DBS Safety / Safety Meetings

Link: https://drive.google.com/drive/folders/11E67WkJF0_hJ8xzf694FhTmGSdShd6mK

OVERWRITE (no duplicates)

Saving again for the same month replaces the same two files.

Example: Save on Monday and again on Friday !' still only one September 2026 PPE sign-in.pdf, but Friday's version.

4. Google sign-in (the shop key)

WHY GOOGLE ASKED YOU TO SIGN IN

The website cannot open your Drive by itself. Google needs the shop Gmail (drawerboxspecialties@gmail.com) to say yes, like using a key.

WHAT WE SET UP IN GOOGLE CLOUD

- A project named DBS Safety
- Turned on Google Drive API
- OAuth consent screen (External, Testing mode)
- Web app Client ID (public — safe in the website)
- Test user: drawerboxspecialties@gmail.com
- Allowed website addresses (origins):
 - <https://drawerboxspecialties-ops.github.io>
 - <http://127.0.0.1:43151> (for local testing)

WHAT WE DID NOT NEED

- Client secret — never put this in the website or GitHub
- A separate Google Drive button in the app
- Paying Google for verification (Testing mode is enough for the shop)

5. GitHub (publishing the app live)

WHAT GITHUB DOES HERE

GitHub stores the code and hosts the live website for free (Pages).

REPO

drawerboxspecialties-ops/dbs-safety

WHAT WE PUSHED

All app code: sign-in sheet, smooth signatures, Drive upload.

SECRET WE ADDED (you cannot see it in the code)

GitHub Actions secret: `GOOGLE_CLIENT_ID`

When the site builds, it bakes the Client ID in so Save progress knows which Google app to use.

LIVE URL AFTER DEPLOY

<https://drawerboxspecialties-ops.github.io/dbs-safety/>

6. End-to-end story (one meeting)

STEP BY STEP — SEPTEMBER PPE EXAMPLE

1. Supervisor opens the live app on the shop tablet
2. Taps September!' PPE talk!' Sign this sheet
3. Each worker taps their row!' Sign here!' signs!' Done
4. Supervisor taps Save progress
5. First time: Google popup!' sign in as drawerboxspecialties@gmail.com
6. App uploads:
 - September 2026 PPE sign-in.pdf
 - September 2026 PPE talk.pdf
7. Files sit in DBS Safety / Safety Meetings on Drive
8. Next save same month!' same files updated, not copied

BACKUP COPIES

- Email PDF — email the sign-in sheet
- If Drive fails — PDFs download to the tablet

7. What it costs you

SHORT ANSWER: \$0/month for normal shop use.

ITEM BY ITEM

GitHub Pages (hosting the website)

Cost: \$0 for public repos on github.io

Google Cloud (OAuth + Drive API)

Cost: \$0 — OAuth and Drive API have no fee for this use

Note: App stays in Testing mode; only test users you add can sign in

Google Drive storage

Cost: \$0 extra if you stay within your Gmail/Drive storage
(typically 15 GB free; PDFs are small — a few MB per month)

Google verification (publishing OAuth to everyone)

Cost: \$0 — we did NOT do this; not needed for one shop Gmail

Custom domain (optional)

Cost: ~\$10–15/year if you ever want safety.yourdomain.com
Not required today

Vercel / paid hosting (optional)

Cost: \$0 on free tier if you use it later; GitHub Pages is enough

Cursor / building the app

Depends on your Cursor plan — not an ongoing fee from Google/GitHub

ONGOING MAINTENANCE

Mostly \$0. You may need to re-approve Google sign-in if tokens expire
(just Save progress again and sign in).

8. Quick reference

Live app:

<https://drawerboxspecialties-ops.github.io/dbs-safety/>

Drive folder:

https://drive.google.com/drive/folders/11E67WkJF0_hJ8xzf694FhTmGSdShd6mK

GitHub repo:

<https://github.com/drawerboxspecialties-ops/dbs-safety>

Shop Gmail for Drive:

drawerboxspecialties@gmail.com

If Save progress fails:

- Check you are a Test user in Google Cloud !' Audience
- Check popups allowed on the tablet
- PDFs still download as backup
